### **PART 1:** Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	It is a case report, needs to be written with proper sequence of events, followed by relevant investigations, diagnosis and treatment. The conclusions mentions that it fulfils Studdiford's process ( actually it should be Criteria ); but case is written so haphazardly, one cannot make out anything. We are unable to appreciate when and how the diagnosis was made. Why septicaemia is mentioned. There are so many grammatical mistakes, like the gender of the patient mentioned as male. Irrelevant things like, abnormalities in foetus, we are not bothered about its survival, if ectopic pregnancy is suspected.	
<b>Minor</b> REVISION comments	Why discussion is written twice ?	
<b>Optional/General</b> comments	What is meant by Abdominal tests ? What is role of Medical Interview ( probably Intervention )	

### **PART 2:**
