Review Form 1.6

**PART 1: Review Comments**

	<b>Reviewer's comment</b>	<b>Author's comment</b> (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	<ul style="list-style-type: none"> <li>- The researcher should add paragraph regarding compassion satisfaction in the introduction because it is a main variable in the research.</li> <li>- The researcher should mention the 66-item Compassion Satisfaction/Fatigue Self-Test was adopted or adapted from other researcher, what about the reliability score of this tool?.</li> <li>- Why the researcher show the result of compassion fatigue, burnout and satisfaction in table (2) by two ways ( tables and figures). He can use only one of them table or figures.</li> <li>- In table (4.2), the researcher should write in the table “<b>level of burnout</b>” not “<b>level of compassion fatigue</b>” to be matched with the title.</li> <li>- The researcher wrote results and discussion, where is the part of discussion?, it should be added.</li> <li>- In table (4.1, 4.2, 4.3), the researcher should replace the letter <b>P=21.03</b> to the <b>table value= 21.03</b>, because letter <b>P</b> indicates to <b>p-value</b>, this number isn't <b>p-value</b>, it is table value as in tables 3.</li> </ul>	
<b>Minor</b> REVISION comments	<ul style="list-style-type: none"> <li>- Where is the sample size formula that is used to collect 80 nurses?. On what basis, the researcher divided the nurses into two groups (30 casualty nurses and 50 intensive care unit nurses) or the researcher collected all nurses available at the selected unit of the hospital should be mentioned.</li> <li>- Why the researcher didn't use <b>spearman correlation</b> between age and level of compassion fatigue , burnout level and compassion satisfaction to identify type of relation(direct or indirect relation) and its strength( strong or weak relation) instead of chi-square.</li> <li>- Why the researcher didn't use <b>spearman correlation</b> between years of nurses experiences and level of compassion fatigue , burnout level and compassion satisfaction to identify type of relation(direct or indirect relation) and its strength( strong or weak relation) instead of chi-square.</li> <li>- What about mean and standard deviation of nurse's age. It preferable to be added.</li> <li>- In table (3.1). Number of standard deviation in the ICU nurses is nearest to the number of mean in relation to compassion fatigue, it should be check again.</li> </ul>	
<b>Optional/General</b> comments	<ul style="list-style-type: none"> <li>- In the procedure, the researcher can add the data collection from the nurses, collected on individually basis or by all the group of nurses in the same time. The researcher can also add time of data collection from nurses.</li> </ul>
