PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments	<ol style="list-style-type: none">1) In both abstract and main text the content of the section Expected outcome is not making any sense. Be specific about what you want as outcome after a 5 year follow up of tracking the symptoms and how to make sure that the symptoms are vaccine induced or not2) Considering the follow up period, please explain how will you deal with the obvious recall bias.3) Kindly explain how vaccination against Covid 19 and the disease itself are expected to remain relevant 5 years from now. A shorter follow up period 1 year or an year and a half at the most could bring about more relevant findings. If the aim is to counter rumours against covishield vaccination then a 5 yr period indeed too long. Authors are requested to justify the follow period	
<u>Minor</u> REVISION comments	<ol style="list-style-type: none">1) In the Aim section of Abstract, better not to mention the name of the institution and instead write in a tertiary care health institute at such and such place4) In abstract: "Follow up will be maintained"5) Cohort study is always analytical, so write prospective cohort study in study design	
<u>Optional/General</u> comments		

PART 2:

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Are there ethical issues in this manuscript?	<i>(If yes, Kindly please write down the ethical issues here in details)</i>
