PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<u>Compulsory</u> REVISION comments		
<u>Minor</u> REVISION comments		
<u>Optional/General</u> comments	<p>This article discusses the 2019 coronavirus crisis, which (COVID-19) has blocked the whole world in recent months. Major countries in the world, including India, have been prominent victims, with each country exceeding the threshold of 100,000 cases of COVID-19. Blockages, along with behavioral changes such as physical distancing, the use of face masks, frequent hand washing with soap, respiratory etiquette, and updating personal health awareness are proving to be effective in slowing down the COVID-19 curve in many countries. As the world looks at a potential economic downturn, many countries around the world have slowly and steadily begun to reduce their bottlenecks, in the hope that the above-mentioned measures will prevent an uncontrollable increase in COVID-19 cases. The multiple blockades of 25 March 2020 have helped to slow down the COVID-19 curve in India and given the central and state governments much needed time to expand their health infrastructure and raise awareness about various preventive measures, that will work. a long way to go to keep the curve under control in the coming months. Consider ca acest articol aduce un plus de informatii despre boala Covid 19. This information is important and helps to raise awareness of the effects of the disease on the population. Educating the population in this regard could have a positive effect in reducing the number of cases</p>
