PART 1: Review Comments

	Reviewer's comment	**Author's comment** *(if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)*
Compulsory REVISION comments	**The article contains very useful and interesting information, but it also has some major flaws that require revision:** **-the title of the paper should be more suggestive – it should contain suggestive elements for the contained topic;** **-question arise concerning the patient informed consent and agreement of the Ethics Commission – please specify the number;** **-the abbreviations should be explained the first time they appear in the text (MTA, LSTR);** **- word editing and English language need correction;** **- numbering of bibliographic references in the text - 4 appears before 3, and reference 10 is not found in the text;** **- the methodology part requires a more detailed presentation of each stage, until the end: how was the revascularization of the pulp ensured? Was the paste reapplied during the check-ups?** **- the Introduction part, as well as the Discussion part, should refer to existing studies in the literature on this topic, especially as reviews are available;** **- the last sentence, before the Conclusions chapter, is unfinished;** **- half of the bibliographic references are older than 2010, and some of them were accessed in 2008/2009. I recommend consulting some references from the last 5 years and more recently accessing the specialized sites.**	
Minor REVISION comments		
Optional/General comments
