A REVIEW ON ANTIUROLITHIATIC(PASHANABEDA) EFFECTS OF HERBAL AND MARINE RESOURCES

ABSTRACT

Urolithiasis (urinary calculi) is stone development in bladder, urinary tract and kidney. The rise in frequency and occurrence of kidney stones is talking point all over the world. 12% of the global population suffer from urinary stone formation. The phenomenon effect of urolithiasis is lowered by using the pashanabeda elements. Pashanabeda (Pashan: stone; bheda: to break) is a Sanskrit locution which implies the breakage of stone. The adverse reactions caused due to man made drugs has prompted to rejoin with the natural safe medication. The evolution of plant-based therapeutics has shown terrific notice and demand as an modernistic drug entities all over the sphere. The present review aims the investigators to easily identify and develop plant and marine resources beneficial in management of urolithiasis.

Keywords: Urolithiasis, Antiurolithiatic , Pashanabeda, Herbal, Animal, Marine, Microbial , Mineral

1. INTRODUCTION

Humankind is known to be suffering from urinary stone disease since ancient times, and it was first found in tombs of Egyptian mummies dating back to 4000BC and in the graves of North American Indians from 1500 BC – 1000BC. (Mohammad Shamim Khan¹ et al 2016)

UROLITHIASIS OR NEPHROLITHIASIS:

Urolithiasis or nephrolithiasis is one of the oldest and endemic painful urological disorder. The genesis of stone in urinary system i.e., in the kidney, ureter and urinary bladder or in the

urethra is known as urolithiasis (ouron =urine, lithos = stone). (Mansoor, M., Jamil et al 2019)

World population of 3-20% have propensity to form single urinary stone in their lifespan of 70 years. (Ram Prakash et al, 2019). 12% of global population suffer from urinary stone formation. (shruthi gupta et al 2018)

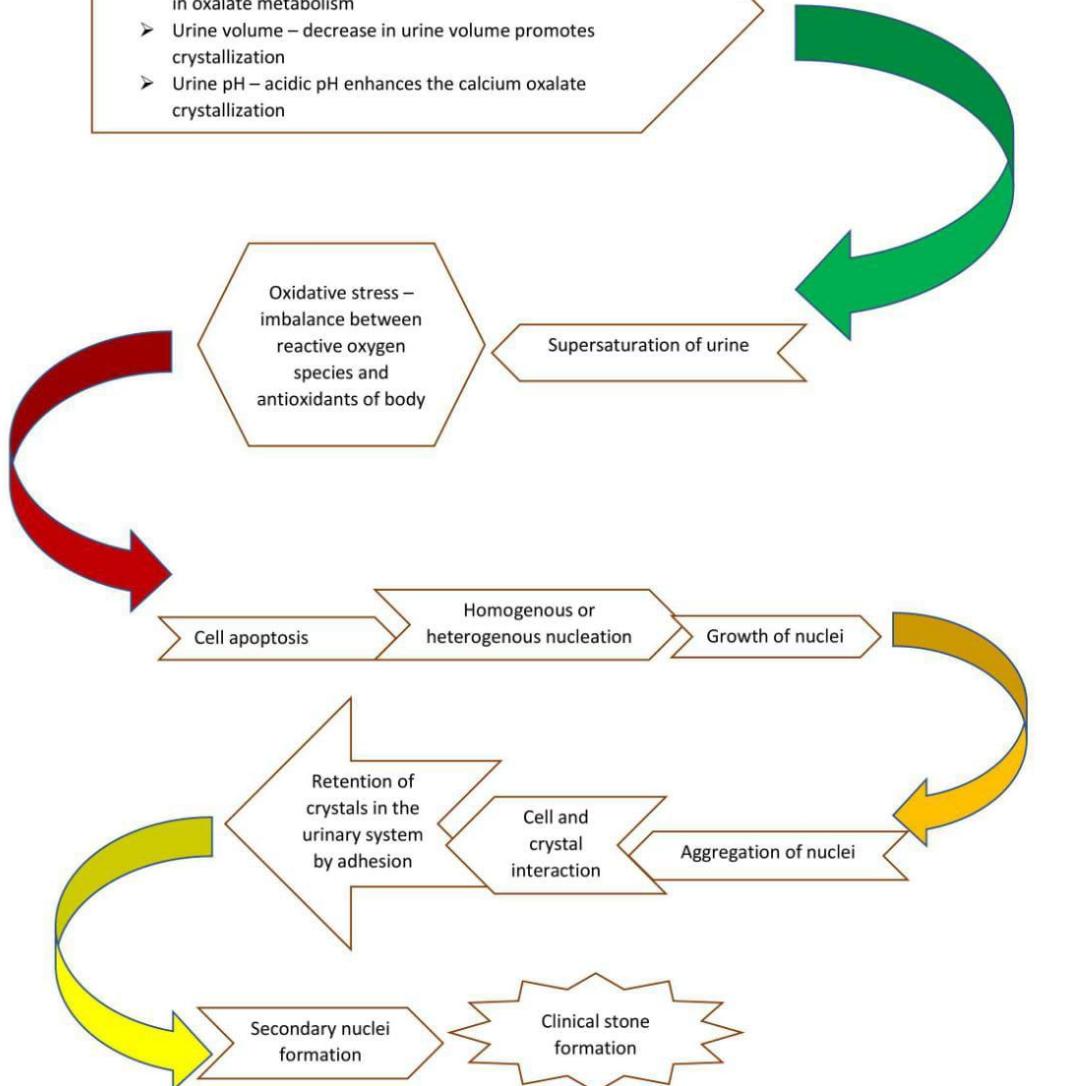

The average lifetime risk of stone formation has been reported in the range of 5-10% population in which there is a predominance of men over women. A handful of lithogenic factors that leads to formation of stones such as sexuality, age, profession, food habits, water intake, education level, national diffusion, socioeconomic status, metabolic and genetic disorders and diseases. (Mohammad Shazib Faridi et al. 2020; Victoriano Romero 2010; Yu Liu et al 2018)

Fig 1. FLOWCHART of MECHANISM OF URINARY STONE FORMATION

FACTORS THAT PROMOTE STONE FORMATION:

- Hypercalciuria – increases intestinal calcium absorption
- Hyperoxaluria – overproduction of oxalate occurs due to error in oxalate metabolism
- Urine volume – decrease in urine volume promotes crystallization
- Urine pH – acidic pH enhances the calcium oxalate crystallization

MECHANISM OF URINARY STONE FORMATION:

Stone genesis is complicated process which results because of succeeding Physicochemical occurrences such as excellent saturation, growth, nucleation, retention and aggregation within the renal tubules

The mechanism of stone formation comprises seedling of stone crystals (nuclei formation, nucleation), assemblage of nuclei to interact with inter renal structure (aggregation) and thus

maintain themselves in renal system further aggregate to form secondary nuclei which shape into clinical stone (crystal development). (Vishal N Rathkalar et al.; 2011)

Constituents of stone components may differ, but the severity it causes may vary based on its site, severity of stone formation and its action at site.

The mechanism of stone formation is depicted in flowchart format as indicated below

TYPES OF UROLITHIASIS:

The kidney stone size varies from 5mm to 7mm. different types of kidney stones are included in table format. The type of stone formed is named after its mineral composition.

The most frequent stones are struvite (magnesium ammonium phosphate), calcium oxalate, urate, cysteine and silica. (Shruthi gupta et al. 2018)

TABLE:1 TYPES OF KIDNEY STONES (Shruthi gupta et al. 2018)

S.NO.	TYPES OF KIDNEY STONES	PERCENTAGE OF OCCURANCE	CAUSES FOR KIDNEY STONES	CHARACTERISTIC FEATURE OF STONES
1.	Calcium stones	-	Calcium combines with oxalate and phosphate to form calcium oxalate and calcium phosphate stones. The rise in oxalate and phosphate levels in dietary supplements leads to formation of stones	White, black or grey colored components, radio opaque
2.	Struvite stones	10-15%	Stones are formed due to bacterial infections	Large, glared and laminated
3.	Uric acid stones	5-10%	People with malformation like gout syndrome, obesity and food source rich in purine, protein (meat & fish) results in stone formation	Yellow orange colored, smooth, round or square or diamond or rod shape, pleomorphic

4.	Protease related stones	4-12%	Formation of crystals are recognized in HIV positive patients using protease inhibitors (indinavir sulphate)	-
5.	Cysteine stones	-	Hereditary disorders induce formation of stones	Greenish yellow color, round, shiny, radiopaque
6.	Silica stones	-	Synthetic and herbal medicines induce formation of stones. These are crystal called as drug induced stones	-

PASHANABHEDA:

Pashanabeda is a Sanskrit phrase where the word Pashan means stone and bheda means to break, which literally means the breakage of stones. Several plants such as Bergenia ligulata syn., Saxifraga ligulata etc. are denominated as pashanabeda as they show properties similar to that of water pills and lithiotriptic activities which is included in classics of Ayurveda. (www.ccras.nic.in) (Poonam varma et al.; 2014)

ANTIUROLITHIATIC ACTIVITY:

The components that reduce the stone shaping components in urine and reduce renal retention are known as antiurolithiatic components. The activity is known as antiurolithiatic activity

This review article mainly focuses on various plants and marine accredited with diuretic and antiurolithiatic activities.

METHODOLOGY:

The components are classified into natural sources and synthetic sources. Natural sources are further classified into herbal source, animal source, marine source, microbial source and mineral source.

HERBAL SOURCES:

The plants that show antiurolithiatic activity and diuretic activity are classified based on their morphological characteristics and depicted examples in alphabetical order. It is further depicted in the form of table as shown below (table:2) (Salman ahmed et al., 2016 different articles)

TABLE:2 PLANTS WITH ANTIUROLITHIATIC AND DIURETIC ACTIVITY

S.NO.	CLASS (ROOT)	ANTIUROLITHIATIC PLANTS
1.	<i>Abutilon muticum</i> (Delile ex DC.)	<i>Hygrophila auriculata</i>
	<i>Achyranthus aspera</i> L.	<i>Hygrophila schulli</i>
2.	<i>Acorus calamus</i>	<i>Ichnocarpus frutescens</i> (L.) W.T.Aiton
	<i>Aerva javanica</i>	<i>Indigofera tinctoria</i>
3.	<i>Ageratum conyzoides</i>	<i>Juniperus chinensis</i> .
		<i>Juniperus polycarpos</i> K.Koch
4.	<i>Alcea fasciculiflora</i> Zohary	
	<i>Alhagi mannifera</i> Jaub. & Spach	<i>Lawsonia inermis</i> L.
5.	<i>Alhagi maurorum</i> Medik.	<i>Levisticum officinale</i>
	<i>Alisma orientale</i> (Sam.) Juz.	<i>Medicago sativa</i> L.
6.	<i>Angelica sinesis</i> polysaccharide	<i>Mimosa pudica</i> L.
	<i>Apium graveolens</i> L.	<i>Moringa oleifera</i> root-wood
7.	<i>Aquilegia fragrans</i> Benth.	<i>Musa balbisiana</i> Colla.
	<i>Arctium lappa</i>	<i>Musa × paradisiaca</i> L.
8.	<i>Arnebia euchroma</i>	<i>Nothosaerva brachiate</i> (L.) Wight.
	<i>Asclepias syriaca</i> L.	<i>Ononis spinosa</i>
9.	<i>Asparagus officinalis</i>	<i>Petroselinum crispum</i>
	<i>Asparagus racemosus</i>	<i>Petroselinum sativum</i>
10.	<i>Asparagopsis adscendens</i> Kunth. / <i>Asparagus officinalis</i>	<i>Phragmites australis</i> (Cav.) Trin. Ex Steud.
	<i>Anneslea fragrans</i> Wall. / <i>Aquilegia fragrans</i> Benth.	<i>Piper methysticum</i> G.Forst.
11.	<i>Barbaarea vulgaris</i> R.Br.	<i>Plantago major</i> L.
	<i>Barleria prionitis</i> L.	<i>Raphanus sativus</i> L.
12.	<i>Berberis vulgaris</i>	<i>Rheum emodi</i> Wall.
	<i>Bergenia ciliata</i>	<i>Ribes triste</i> Pall.
13.	<i>Beta vulgaris</i> L.	<i>Ricinus communis</i> L.
	<i>Biophytum abyssinicum</i> Steud. Ex A.	<i>Rotula aquatica</i> Lour.

Rich.	
<i>Biophytum reinwardtii</i>	<i>Rubia tinctorum</i>
<i>Biophytum sensitivum L.</i>	<i>Rubus caesius L.</i>

ANIMAL SOURCE:

The animal source with litholytic activity are listed in table:3 (Mohammad Shamim Khan et al., 2016)

TABLE:3 ANIMAL SOURCE WITH ANTIUROLITHIATIC AND DIURTIC ACTIVITY

S.NO.	NAME	PARTS USED
1.	Burnt Scorpion	Whole part
2.	Sparrow	Brain
3.	Purified Earth worm	Whole part
4.	Burnt rabbit	Whole part

MARINE SOURCES:

The marine source with antiurolithiatic activity and diuretic property are listed in table:4(Mohammad Shamim Khan et al., 2016)

TABLE:4 MARINE SOURCE WITH ANTIUROLITHIATIC AND DIURETIC ACTIVITY

S.NO.	CHEMICAL CONSTITUENT	TYPE OF ORGANISM	REFERENCE
1.	Chitosan (chitin) biopolymer	Marine and terrestrial organisms Macroalgae, microalgae	Moacir Fernandes Queiroz et al., 2014
2.	Fucoxanthine (active) carotenoid	Macroalgae, microalgae	Rulin Wang et al., 2020
3.	C-Phycocyanin	Spirulina plantensis(blue-green algae)	Débora Pez Jaeschke et al., 2021

MICROBIAL SOURCE:

Oxalate degrading bacteria such as *Bifidobacterium* species, *bacillus* species, *oxalobacter formigenes*, *porphyromonas gingivalis*, *bacillus subtilis* and *Lactobacillus plantarum* show antiurolithiatic activity by degrading oxalate crystals.(Rouhi Afkari et al.,, 2019)

MINERAL SOURCE:

The mineral source with diuretic and litholytic activity are listed in table:5(Mohammad Shamim Khan et al.,, 2016)

TABLE:5 MINERAL SOURCE WITH LITHIOLYTIC AND DIURETIC ACTIVITY:

S.NO.	NAME
1.	Alum
2.	Burnt crystal
3.	Fish stones
4.	Lapis Judaicus / Jews Stone
5.	Potassium carbonate
6.	Potassium nitrate

2. CONCLUSION

Urolithiasis is outstanding considerable malady of the urogenital system and also a great origin of morbidity. With its several aetiolognous and high incidence of re occurrence, renal tract stone malady come up with a medical dispute.

Despite of many traditional curatives feasible for the urolithiasis, but re occurrence of stone formation still remains as a problem still to date there is no standard drug available and

foremost disadvantage in the maturing of a standard drug may be the multifactorial kind of the disease and several chemical varieties of renal stones.

Many curatives has been serviced during the ages to cure renal stones. In the classic system of medicine, utmost of the therapies was taken from plants and they were proven to be useful though the rationale at the rear of their used is not Triumphant through systematic pharmacological and clinical studies apart from some compounded herbaceous medicines and plants. Herbal medicines contain several phytonutrients and exert their beneficial outcomes by various mechanisms in treatment of urolithiasis.

COMPETING INTERESTS DISCLAIMER:

Authors have declared that no competing interests exist. The products used for this research are commonly and predominantly use products in our area of research and country. There is absolutely no conflict of interest between the authors and producers of the products because we do not intend to use these products as an avenue for any litigation but for the advancement of knowledge. Also, the research was not funded by the producing company rather it was funded by personal efforts of the authors.
